

HENDRICH L. CAPALARAN

AI Automation Engineer | Workflow & Systems Integration Developer

H.drichcapalaran@gmail.com | +63 947 570 9304 | Bulacan, Philippines | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

AI Automation Engineer who designs and ships end-to-end workflow systems using n8n, Python, and LLM APIs. Builds event-driven, API-connected automations that replace manual business processes — including multi-step agent workflows with deterministic scoring logic, human-in-the-loop review gates, and error handling on every external call. Comfortable across the full stack of an automation: webhook intake, data validation, LLM reasoning steps, CRM and database sync, and monitoring dashboards. Background in technical troubleshooting and content quality assurance drives a habit of mapping and validating business logic before automating it.

TECHNICAL SKILLS

Automation Platforms: n8n (primary), Zapier, Make (Integromat), GoHighLevel — workflow design, trigger/action logic, webhook configuration, error handling, retry logic

AI / LLM Engineering: Claude, ChatGPT, Google Gemini, Ollama (local models) — prompt design, AI agent tool-calling, structured output extraction, human-in-the-loop review patterns

Languages: Python, JavaScript, TypeScript, HTML

Frameworks & Libraries: FastAPI, Flask, Node.js, Express, NestJS, React, Vite, Tailwind CSS, Bootstrap

Databases: PostgreSQL, MySQL, SQLite, Redis, Amazon DynamoDB

ML & Data: PyTorch, TensorFlow, scikit-learn, pandas, NumPy

Integrations & APIs: REST APIs, webhooks, HubSpot, Slack, Asana, Notion, Google Workspace (Sheets, Docs, Gmail, Calendar), Microsoft 365

Tools & Version Control: Git, GitHub, Postman, VS Code, Docker

Practices: Process mapping, requirements gathering, automated testing, error handling and observability, technical documentation

PROJECTS

AI Meeting Ops Assistant | *Python, FastAPI, Claude / Ollama, Asana, Notion, Slack*

- Built an end-to-end meeting-to-action-items pipeline: a folder watcher detects new transcripts, an LLM summarizes the meeting and extracts action items, tasks are created automatically in Asana or Notion, and a recap is posted to Slack for human review.
- Designed the LLM layer to run against either a hosted model (Claude) or a local model (Ollama), allowing the same pipeline to be deployed in privacy-sensitive environments without sending transcripts to a third-party API.
- Shipped a FastAPI + SQLite web dashboard for run history and pipeline observability, backed by a full test suite of 64 passing tests.

Lead Routing Workflow | *n8n, Google Gemini, HubSpot, PostgreSQL, Slack*

- Engineered a 30-node automation handling lead intake from both a web form and a JSON webhook, with normalization, validation, and duplicate detection before any downstream system is touched.
- Combined AI qualification (Gemini) with deterministic scoring logic so lead tiering stays auditable and repeatable rather than depending on model output alone.
- Automated owner assignment by tier, territory, and round-robin, then synced results to HubSpot, Slack, and a PostgreSQL audit log — with explicit error handling on every external call.
- Kept outreach human-in-the-loop: the workflow drafts the initial email but routes it for human review before send.

AI Booking Agent | *n8n AI Agent framework, Google Gemini, Google Calendar API*

- Built a conversational scheduling assistant that checks availability, retrieves existing bookings, and creates, reschedules, or cancels calendar events entirely through natural-language chat.
- Implemented LLM tool-calling against the Google Calendar API, mapping conversational intent to concrete API actions and returning confirmations through a hosted chat widget.

PROFESSIONAL EXPERIENCE

AI Automation Specialist | Upwork (Freelance) — Remote

September 2025 – July 2026

- Designed and deployed client automations in n8n and Zapier covering recurring email routing, calendar scheduling, and report generation, removing standing manual tasks from client operations.
- Mapped existing manual processes with clients before building, translating informal business rules into explicit trigger/action logic and documented workflows.
- Built standardized file and database organization systems across multiple concurrent clients, reducing time spent locating and updating records.
- Produced client-ready graphics and presentation assets in Canva and Figma using templated, repeatable production workflows to shorten request-to-delivery turnaround.

Digital Content Editor I | Reed Elsevier Philippines — Quezon City (Full-time)

May 2024 – Present

- Maintain 100% compliance with client specifications across digital publishing platforms through structured, in-depth quality checks prior to release.
- Improved content accuracy and reduced post-publication corrections by implementing consistent review checkpoints across the editorial workflow.

SEO Specialist | Upwork (Freelance) — Remote

January 2025 – November 2025

- Increased organic search visibility for client websites by optimizing on-page elements (meta tags, titles, descriptions) and executing off-page strategies including backlink building and internal linking.
- Supported content publishing pipelines by coordinating blog posting schedules and maintaining a consistent publishing cadence.

Customer Service and Technical Support Representative | TaskUs — Meycauayan, Bulacan (Full-time)

December 2022 – January 2024

- Resolved technical issues for an average of 30 customers per day by diagnosing root causes using remote desktop tools and internal knowledge base resources.
- Maintained a 92% first-contact resolution rate by applying structured troubleshooting frameworks under time pressure — the same root-cause discipline now applied to debugging automation workflows.

EDUCATION

Bachelor of Science in Information Technology | Polytechnic University of the Philippines — Sta. Mesa, Manila

2020 – 2024

- Dean's Lister and President's Lister; Honor and Award Recipient.
- Led a capstone mobile application development project spanning requirements gathering, development, UI/UX design, and cross-functional team coordination.

CERTIFICATIONS & CONTINUOUS LEARNING

- AWS AI Practitioner Challenge — Udacity
- AWS AI & ML Scholars Nanodegree Program, AI Agent Engineer track (in progress)
- AI Developer Certification Program (in progress)
